[🧪wa-config] [Warning about Display Name] make the display name "Monwoo Web Agency Config"

> (...) We recommend you make the display name "Monwoo Web Agency Config" (...)
>
> (...) However WA is also often short for WhatsApp, and Facebook has been incredibly aggressive about their trademark (...)
>
> -- Ⓦ *plugins@wordpress.org*

> Ok, name changed. WA prefix still used for code and summary purpose.
>
> Why should WhatApp of Facebook own the right to be the only one to have clean and short names ? Well, I don't relly care of the answer right now. The new plugin name please me, let's call it `"Monwoo Web Agency Config"` for the **title** and `'monwoo-web-agency-config'` for the wordpress.org plugin **slug**.
>
> Moreover, Meta first acquired WhatsApp in February of 2014, while Miguel M. did build Kodiom with partners in 2011 with the WA Branding already used. ("Web Agency" term used by Kodiom thanks to Alan Bey).
>
> -- Ⓜ *M.M. for service@monwoo.com*

[🧪wa-config] [Tested Up To Value is Out of Date] means your plugin will not show up in searches

> Ok, fixed.
>
> Fixed with `Tested up to: 6.0`
>
> -- Ⓜ *M.M. for service@monwoo.com*

[⚗️wa-config] [Encrypted code] code that is not human readable cannot be included in the directory

> (...) guideline states that code that is not human readable cannot be included in the directory (...)
>
> (...) This includes using phar to compress your PHP and making all your PHP mashed into one line. (...)
>
> -- Ⓦ *plugins@wordpress.org*

> Ok, fixed.
>
> See the 'TestableEnd2End' Trait added in v0.0.2 to solve this issue.
>
> Did let end users chose to download the codeception tool from an 'administrator' account or to let them fix the test launch issue by themself.
>
> Feature update :
>
> - add 'wa-testable-e2e' ajax admin actions handeling the codecept.phar needed to launch the end to end test over the production data for 'administrator' accounts.
> - add clickable action link inside "WA Config" -> "Quality review" panel to solve the missing "tool/codecept.phar" file.
> - add a failing common quality review if "tool/codecept.phar" exist with a clickable 'risky non-human readable code' warning action to remove it.
>
> -- ꞎM *M.M. for service@monwoo.com*

[⚗️wa-config] [Included Unneeded Folders] Those folders ARE needed...

> (...) Your plugin includes folders and files that are not required for the running of your plugin (...)
>
> (...) Some examples are : (...) - doc - unit tests (...) isn't going to be used by your users.
>
> -- Ⓦ *plugins@wordpress.org*

> Feature INCLUDED : **doc and tests folder IS GOING to be used** by our users.
>
> We provide a safe base plugin for end to end testings in real production environement.
>
> We give the 'adminstrator' account the possibility to launch the end to end tests by a simple click in the "WA Config" -> "Quality review" panel.
>
> So we need that tool/codecept.phar to run the full business features of this plugin.
>
> Cf previous comment for the chosen fix about that issue.
>
> We did review those files with the same rules as the main plugin.
>
> Moreover, thoses tests files can't be launched without tools/codecept.phar.
>
> -- ꞎM *M.M. for service@monwoo.com*

[🧪wa-config] [Plugin Permalink Does Not Match Text Domain]

> Ok, fixed.
>
> Ok, fixed accordingly to the new plugin slug :
>
> ```
> 'monwoo-web-agency-config'/** 🧵 */
> ```
>
> -- Ⓜ *M.M. for service@monwoo.com*

[🧪wa-config] [Data Must be Sanitized, Escaped, and Validated]

> (...) prevent a user from accidentally sending trash data (...)
>
> (...) as well as protecting them from potential security issues. (...)
>
> https://developer.wordpress.org/plugins/security/securing-input/
> https://developer.wordpress.org/plugins/security/securing-output/
>
> -- Ⓦ *plugins@wordpress.org*

> Ok, fixed.
>
> Did check :
>
> - 'echo'
> - inputs comming from $_GET, $_REQUEST and $_POST.
> - inputs comming from php native `filter_input` transformed to sanitized `filter_var`.
> - form validations for admin options by using `_wp_json_sanity_check` on first line
>
> -- Ⓜ *M.M. for service@monwoo.com*

[🧪wa-config] [Do not use HEREDOC or NOWDOC syntax in your plugins]

> Ok, fixed.
>
> Fixed by using `strings`, common `html output` with regular php tags and a new `wa_render` utility function
>
> -- Ⓜ *M.M. for service@monwoo.com*

[🧪wa-config] [Thanks] For your time and answers.

> It's a pleasure to get your feedbacks.
>
> Many thanks.
>
> -- 🌙M *M.M. for service@monwoo.com*
